DETAILED ACTION

Election/Restrictions

1. Applicant is required under 35 U.S.C. 121 to elect one of the following disclosed species for prosecution on the merits to which the claims 1-35 shall be restricted if no generic claim is finally held to be allowable. This requirement is to facilitate examination due to the broad range of materials/compositions available in Applicant's system (see p. 3 of Specification filed Sept. 9, 2004):

A. elect the material composition of the gain medium (substance) from:
macromolecular substance, silica-based, chalcogenide glass, GaN, and GaN-based.

Note: In regard to the single species election of A. the election should not be open-ended (i. e. comprising). Instead it should be a list of substances that must be in the gain medium, (e. g. a silica based-substance and a chalcogenide glass). An open-ended election will be considered non-responsive.

Upon election of single species A, Applicant is further required under 35 U.S.C. 121 to elect one of the following disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable (currently, no claims appear to be generic). This additional requirement is to facilitate examination due to the broad range of dopants available in Applicant's system:

(1). elect the material composition of the *dopant* in the gain medium from:
excited elements, rare-earth elements, nanocrystals

Note: In regard to the single species election of (1). the election should not be open-ended (i. e. comprising). Instead it should be a list of substances that the gain

medium must be doped with, (e. g. rare-earth elements). An open-ended election will be considered non-responsive.

Currently, claims 1-3 and 7-9 appear to be generic with respect to species A. and (1).

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
